

R Package `lassogrp` for the (Adaptive) Group Lasso

Werner A. Stahel, ETH Zurich

July 24, 2021

Abstract

The lasso is a well known method for automatic model selection in regression. This package is an extension of the `grplasso` package based on the PhD thesis of Lukas Meier. It includes more user-oriented wrapper functions.

This vignette waits to be written.

1 Introduction

This is the end of the story for the time being.
